

PEMF | Pulsed Electromagnetic Field Therapy

Learn about this amazing treatment ▼

IS PEMF THERAPY FOR ME?

Pulsed Electro-Magnetic Field Therapy (PEMF) has been available in the U.S. for decades. It has been used for medical conditions in animals and humans worldwide.

PEMF stimulates cell metabolism causing a chain of responses in the body that leads to improved health without side effects. According to research performed by NASA and the Institute of Health, PEMF therapy is considered safe and therapeutic.

How does it work?

PEMF is used to improve circulation and cell metabolism. PEMF works by improving cellular function and health at the molecular level.

PEMF improves health by addressing impaired chemistry and the function of cells. Science has proven that our bodies produce their own magnetic fields. Everything works within the body by electromagnetic exchange. Disruption of electromagnetic energy in cells can cause impaired cell metabolism.

PEMF delivers beneficial, health-enhancing frequencies to the cells and penetrates every cell, tissue, organ and even bones to stimulate electrical and chemical processes in the tissues. PEMF is designed to positively support cellular

energy, which results in better cellular health and function.

How does PEMF help our bodies heal?

- ❖ PEMF boosts cell metabolism
- ❖ PEMF regenerates blood cells
- ❖ PEMF improves circulation
- ❖ PEMF increases oxygen carrying capacity
- ❖ PEMF helps balance immune system

What is PEMF therapy like?

PEMF treatments are not painful and can be relaxing. Treatment times are relatively short in duration (about 8 minutes). A PEMF session will essentially feel relaxing. All you do is lie on a massage table which has a PEMF system on it. No action or physical activity is required.

Most people simply go to a restful, meditative state or fall asleep. Afterwards they arise from the therapeutic experience feeling rested, peaceful and energized...minus some aches and pains.

What benefits I can expect with PEMF therapy over time?

- ❖ PEMF reduces Pain and Inflammation
- ❖ PEMF improves energy and circulation
- ❖ PEMF improves sleep quality
- ❖ PEMF accelerates repair of bone and soft tissue
- ❖ PEMF helps relax muscles

PEMF Therapy has been shown to relieve the symptoms of fibromyalgia,

migraines and insomnia and can expedite healing to injuries in all forms.

How will I feel after treatment?

While everyone's body is unique, patients have reported experiencing tingling in an area of an old injury, while others say they feel a sense of well-being and relaxation.

Can anyone use PEMF Therapy?

Essentially, anyone at any age group, any level of wellness or fitness including both human and animals (of all species), can

use this technology while experiencing no negative side effects with the exception of pregnant women, epileptics and people using pacemakers.
